Summary

BI-1124 is a highly potent inhibitor of the lysosomal cysteine protease Cathepsin S (IC_{50} 7 nM) with a superior pharmacokinetic profile and good selectivity against Cat K, B, and L. It is suitable for *in vivo* use.

Chemical Structure

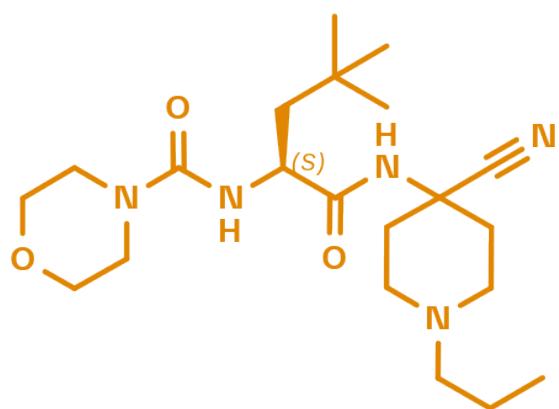

Figure 1: 2D structures of BI-1124

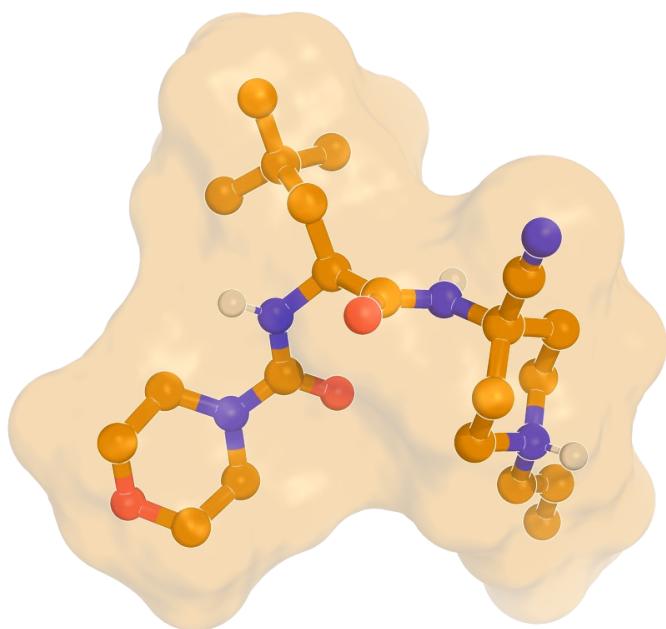

Figure 2: 3D structures of BI-1124

Highlights

BI-1124 is a highly potent inhibitor of the lysosomal cysteine protease Cathepsin S ($IC_{50} = 7$ nM). It shows good selectivity against the related cathepsins K, B and L (> 40-fold). BI-1124 has a PK profile superior to BI-1915 and shows effective dose-dependent inhibition of the specific secretion of ovalbumin-induced IL-2 in T-cells. This compound is suitable for *in vivo* studies.

Target information

Cathepsin S is a 24 kD lysosomal cysteine protease that plays a pivotal role in antigen processing and presentation, which are important processes in normal immune responses and autoimmunity.

In vitro activity

The *in vitro* molecule BI-1915 and the *in vivo* compound BI-1124 are both highly potent inhibitors of Cathepsin S with IC₅₀ values of 17 nM and 7 nM, respectively. BI-1920 does not inhibit Cathepsin S (IC₅₀ > 20 µM) and can serve as a structurally related negative control for *in vitro* experiments.

Both molecules effectively block the specific ovalbumin induced IL-2 secretion in T-cells with EC₅₀ values of 2.8 nM and 0.5 nM, respectively.

PROBE NAME / NEGATIVE CONTROL	BI-1915 (IN VITRO MOLECULE)	BI-1124 (IN VIVO MOLECULE)	BI-1920 (NEGATIVE CONTROL)
MW [Da, free base] ^a	407.6	407.6	365.5

^a *i.v.* dose: 0.4 mg/kg

^b *p.o.* dose: 1.0 mg/kg

In vivo pharmacology

BI-1124 was investigated in a T-cell receptor transgenic DO11 mouse model in which the compound was dosed orally followed by an *i.v.* antigen (ovalbumin) at 0.5 hour with a readout of plasma IL-2 at 3.5 hours.

BI-1124 showed dose-dependent inhibition of the ovalbumin induced IL-2 secretion with an EC₅₀ of 3 mg/kg and 0.3 mg/kg, respectively.

Negative control

BI-1920 is offered as a negative control with low binding affinity to Cathepsin S (K_D 270 μM) and an IC_{50} for the inhibition of Cathepsin S of $>20\mu\text{M}$.

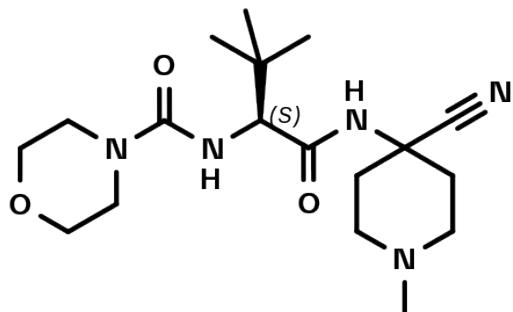

Figure 4: BI-1920 which serves as a negative control

Selectivity

The *in vivo* tool BI-1124 shows good selectivity (>40 fold) against Cat K, B and L. The *in vitro* tool BI-1915 shows excellent selectivity (>500 fold) against related cathepsins with IC_{50} values of $>10\mu\text{M}$ (Cat K and Cat B) and $>30\mu\text{M}$ (Cat L).
